- Implemented numerous sale techniques to up-sell additional warranty protection and current store offers

PROJECTS

Full Stack React Application | https://paw-plan.netlify.app/ | *SQLite, Express, React JS, HTML/CSS, JavaScript*
- Developed a Dog Planner web app on a team enabling users to manage pet care schedules, with features for customizable reminders (walks, meals, vet appointments) and personalized dog profiles, aimed at simplifying pet management for busy owners
- Developed and integrated user authentication and pet registration features using SQLite, Express, and React, enhancing functionality and user experience through extensive testing and front-end to back-end linkage

Personal Portfolio Website | https://nevinramjitsingh.netlify.app/ | *HTML, CSS, JavaScript*
- Engineered and continually enhanced a personal portfolio website to dynamically present academic and professional accomplishments with sections on about, experience, and projects.
- Integrated advanced CSS techniques and JavaScript to implement interactive features such as tooltips on project images for additional project details on hover, enhancing the UX for desktop and mobile users.
- Adopted responsive web design principles to ensure optimal display and navigation across devices, including a tailored hamburger menu for mobile users.

Fitness Tracking Web Application | https://nevins-fitness-forge.netlify.app/ | *React, HTML/CSS, JavaScript, Firebase*
- Developed a fully functional fitness tracking web application called "Nevin's Fitness Forge," enabling users to sign up, log in, and create profiles.
- Implemented BMI and BMR calculations, daily caloric intake tracking with visual progress bars, and weight progress tracking with interactive charts.
- Utilized Firebase Firestore for data storage and Firebase Authentication for secure user management
